What is Butalbital?

Butalbital is a short to intermediate-acting barbiturate used in combination with other agents such as acetaminophen and caffeine to relieve tension headaches and migraines caused by muscle tightness or stress. It works by relaxing muscles and slowing down the central nervous system to block pain signals and reduce headache intensity.

Key attributes:

- Muscle relaxant and anti-anxiety effects
- CNS depressant action to provide sedation and pain relief

- Often combined with acetaminophen (pain reliever) and caffeine (to reduce blood vessel dilation)
 - Available in multiple dosage forms including tablets and capsules
-

How Butalbital Works

Butalbital enhances the inhibitory effects of the neurotransmitter GABA in the brain, producing sedation and muscle relaxation, which helps relieve tension headache symptoms. Acetaminophen provides additional pain relief, and caffeine enhances the effect by constricting dilated blood vessels in the brain.

Important Usage Information

- Intended for short-term use due to risks of tolerance, dependence, and rebound headaches with prolonged use
- Common side effects include drowsiness, dizziness, abdominal discomfort

- Not recommended during pregnancy or breastfeeding without medical advice
 - Should be used under careful medical supervision due to addiction potential
-
